

Accessibility Statement

Our approach to accessibility

At StreamLogic, we believe accessibility is essential.

Everyone should be able to access and understand information—regardless of ability, device, or context.

At the same time, we recognize a reality:

Achieving full compliance with accessibility standards such as WCAG 2.2 or PDF/UA is often complex, time-consuming, and expensive.

As a result, many documents are never made accessible at all.

We believe this must change.

Accessibility is not all or nothing

Accessibility is often treated as a binary outcome:

a document is either compliant or not.

We see it differently.

Accessibility exists on a spectrum.

Every improvement—no matter how small—makes information more usable for more people.

Our goal with CLARITY is to move documents significantly forward on that spectrum, quickly and efficiently.

What CLARITY does

CLARITY automatically analyses and improves PDF documents to make them more accessible for assistive technologies such as screen readers and other accessibility tools.

It can:

1. Improve document structure
2. Add semantic information
3. Enhance readability
4. Provide insight into accessibility improvements through reports

In many cases, documents become fully readable and usable after processing.

What CLARITY does not do

CLARITY is not a replacement for full manual accessibility remediation.

Because the service relies on automated processing and AI:

1. Results may vary depending on the document
2. Some elements (such as complex images or tables) may not be interpreted perfectly
3. Full compliance with WCAG 2.2 or PDF/UA is **not guaranteed**

For documents that require full compliance, manual review and correction may still be necessary.

Our commitment

We are continuously improving CLARITY and investing in better technology.

Our goal is simple:

1. Make accessibility faster
2. Make accessibility more affordable
3. Make accessibility available at scale

We believe that increasing the number of accessible documents has a greater impact than perfecting a small number.

Your responsibility

While CLARITY helps improve accessibility, the responsibility for:

- verifying compliance
- ensuring legal requirements are met

remains with the user.

We always recommend reviewing processed documents, especially when they are used in regulated environments.

Privacy and security

Accessibility should never come at the cost of privacy.

CLARITY is designed with privacy and security as core principles:

1. Documents are processed automatically
2. Files are deleted within 24 hours

3. Document content is not used to train AI models
4. Processing is performed in accordance with GDPR

A shared goal

Accessibility is not just a technical requirement—it's a shared responsibility.

We build the tools.

You apply them where they matter.

Together, we can make more information accessible to more people.
